# STOP RUST

**Rust** is a term which is generally used for a chemical compound iron oxide ( $\text{Fe}_2\text{O}_3$ ). It is formed when iron combines with oxygen or water. Rust poses a significant problem it has been with us since the very dawn of the Iron Age. It not only affects cars, metal furniture and other durable metal objects but also upsets many business setups. It is bad for the people who have shops in cellars. Cellars tend to dampen and the dampness leads to rust or mold. Rust decreases the life of an object and hence, it becomes importantly necessary to remove or prevent rust from occurring.

There are several measures available to control corrosion and prevent the formation of rust. This is called rust proofing. Cathode protection is one such method. It uses electro chemical techniques. Galvanizing is used most frequently these days. It consists of a metal, to be coated, with a thin layer of another metal, generally zinc. Zinc provides cathode protection to the underlying metal as it is more negative than iron. Another technique used to prevent rust is bluing. It provides resistance to rusting for small steel items, fire arms etc. In this the water displacing oil is rubbed onto the blued steel.

Rust decreases the life of any object. Thus, it is very important to take proactive prevention measures in order to inhibit the formation of rust on an object. There are various ways of accomplishing this. The commonest of them is to cover or paint the object with a material that prevents or does not support rust and acts as a [rust remover](#). For an example, the objects are covered with craft and hobby enamels. It has a smooth and satin finish. The ingredients penetrate faster and last longer. It is usually used on wood, metal, wicker and crafts. It also has an excellent chip resistance and is durable. The antique copper and antique gold are also used to give a rich and beautiful look to the objects besides preventing corrosion.

The other methods include the tough and durable epoxy coating of an appliance. It is used for appliances, cabinets and other home use appliances. It consists of ultra hard enamel. It also provides a superior abrasion and scratch resistance. It is washable and gives the user a moisture resistant surface. Lacquer is generally used on furniture and other accessories in order to prevent them from rusting. It gives an ultra rich finish to the objects. It has a smooth and fast dry formula which gives better results.

The most common way to prevent objects from rusting is with the use of [rust paints](#). They can be used indoors or outdoors and have a fast dry formula. Besides, preventing rust, it gives a smooth and durable glass finish to the objects. It penetrates the surface more and lasts much longer than ordinary paints. It is weather resistant and gives easy soap and water clean up. It also has excellent adhesion and superior coverage over other ordinary paints. These rust paints are developed especially to prevent corrosion by resisting moisture. They are used on furniture, outdoor fixtures, railings, mail boxes, doors, windows, bicycles among others.

# RUST BULLET

## V/S POR 15

Rust is a problem that has been plaguing our society since the Iron Age. Many treatments have been tried to cure the rust problem but only temporary solutions have been found or used with little effect. In our present times, the market is flooded with rust prevention products like the POR15, Rustoleum, and Wasser products etc. All these products treat rust but have some drawbacks either the preparation costs or the maintenance costs are high and most of these products are short-term treatment requiring many additional steps to achieve minimal results.

Rust Bullet is a rust inhibitor coating and a rust prevention product. This product is a long-term solution to the 'irritating' rust problems of today's world. Rust Bullet, LLC claims (with over 3 years of extensive testing results) that once applied the product is effective for as long as ten years who else is willing to say that?. Rust Bullet has many advantages. It requires very little prior surface preparation and can be directly applied to the metal surface. You can use it on rusted as well as clean surfaces. The product can be applied easily with either a brush a roller or sprayed onto the rusted surface. Rust Bullet application is a simple one-step process that any body can manage. Rust Bullet acts as a rust remover and rust repair product which tackles the menace of the rust killing effects on metal.

Rust Bullet out performs all the other major rust prevention products in the market place today like POR15 and Rustoleum etc. This is not a mere statement but a scientifically proven fact and many major international laboratories vouch for the fact.

- POR 15 requires a four-step application process including the necessary purchase of additional products to achieve an inferior result as compared to Rust Bullet, which has only a one-step two coat application process that achieves a superior result.
- POR15 paint covers 350 sq ft with one gallon while Rust Bullet covers 400 sq ft with one gallon. Mil for Mil Rust Bullet is tougher. Note, 4 mils is equal to a sheet of regular copy paper.
- The cost per Gallon of POR15 is \$117.75 plus the necessary purchase of additional products to complete the task. While the total cost of Rust Bullet is only \$116.99 per Gallon a far better value.
- POR15 has high maintenance cost and questionable longevity, while Rust bullet has low maintenance cost and when properly applied will stop or kill rust for over 10 years.

Rust Bullet is undoubtedly a better and more effective choice as compared to other rust prevention products available in the market. This cost effective product has many uses and is therefore customized for residential or farm uses, commercial or industrial uses and automobile uses. Rust Bullet products take care of your metal objects and appliances by providing rust prevention and [rust repair](#) as well as providing a long-term solution to rust corrosion.

Visit the site [www.rustbullet.com](http://www.rustbullet.com) to know more about a wonderful product that takes care of your rust related worries once and for all.

# RUST BULLET

## AUTOMOTIVE PAINT

If you are a car owner then rust is one of your worst enemies. You have to constantly worry and take care of your beloved car no matter how old it may be. There are many products available in the market that deal with the car rust problem but most of them are only a temporary solution and are rendered ineffective after some time. Rust Bullet's **automotive paint** offers a more effective and long lasting solution to the car rust problem.

Rust can damage your vehicle, so beware! Rust has detrimental effects on the physical health of the car. Due to rust, Iron metal parts that are supposed to slide over each other can get stuck. In a car, this could mean trouble. Rust has the ability to make holes in the metal sheet skin of the car, disfiguring your car and inviting trouble. Rust also changes the color of the metal and makes it weak & rough. Rust can eat away the metal completely, it is therefore very necessary to carry out a regular check of your car for rust to avoid any future troubles. In case your car has been a victim of rust or otherwise, it is the time for some long-term treatment such as use of a terrific product on the market place today called Rust Bullet.

Rust Bullet acts as a [rust preventive](#) product as well as rust repair product. The product guarantees to [stop rust](#) and provides rust prevention for as long as ten years. The superiority of Rust Bullet has been tested and retested scientifically proven to be the best choice for the savvy consumer in today's world, Rust Bullet's patented new technology has outperformed Rustoleum and POR 15 in independent laboratory testing.

### Advantages of Rust Bullet Automotive Paint

- Applying Rust Bullet paint is a one-step two coat application process that requires very little surface preparation.
- You can apply the [Automotive Paint](#) on any type of surface i.e. clean or rusty metal or car surfaces.
- The car paint is UV resistant lasting for many, many years. It does not require any primer prior to application.
- The paint is an excellent adhesion promoter and enhances the adhesive properties of any topcoat you may wish to use.
- The Automotive Paint is very easy to apply and can be sprayed, rolled or brushed on any surface smooth clear or rusted makes no difference.
- The car paint offers excellent abrasion resistance. It is very resistant to acid splash and harsh chemical solvents or acids.
- It provides low cost maintenance. When properly applied Rust Bullet rust paint will stop and kill rust for over 10 years.

Rust Bullet can be applied as an [Automotive Undercoating](#) or a Car Paint as per requirement. Before applying the paint remove the rust flakes with the help of wire brushing. Apply the paint evenly with smooth strokes. It is required to apply a second coat of paint to cover any pinholes that may form from the first coat expelling the dehydrated rust through its pores. This second coat will provide a non-penetrable protective covering that protects your car from rust for a decade. In case there are any scratches, you just have to reapply the paint on the scratch to prevent rust formation easy as that.

Visit the site [www.rustbullet.com](http://www.rustbullet.com) to find out more about Rust Bullet products and their uses.

# CAR RUST REMOVER

**Rust** has been afflicting us since we started using metal in our day-to-day lives. Most durable and tuff objects or machines are made from the iron metal, as it is a strong and sturdy metal. However, rust “the metal cancer” weakens the metal and in the end will destroy the metal object. If you own a car in a humid climate must be battling with car rust problems. It is very essential that proper car [rust prevention](#) steps are taken in advance and the services of a good quality car rust remover are employed for the maintenance and long life of your car.

Rust can really play havoc with your car if you do not take proper measures to ensure that rust prevention or [rust repair](#) steps are started to prevent damage to your vehicle. Rust can cause holes in the metal sheets, it can hamper the smooth running of the car by jamming metal objects that are supposed to slide or move. It can change your flashy car into a rough, discolored vehicle that belongs in the ‘old stone age’. Therefore, to restore your car to its former glory, use a product that treats the problem seriously and provides you with a long lasting solution.

As rust is a type of iron oxide that is formed in the presence of moisture & air and a vehicle is constantly exposed to these elements of nature, it is necessary to invest in a good rust prevention product for the security of your expensive investment.

Rust Bullet comes to your rescue in a high humid scenario, as it provides an easy solution to your rust problem. The product involves a one-step application process with little surface preparation. You can apply the car [rust remover](#) directly on the surface with the help of spray equipment or just a brush works well. The paint is UV resistant and offers superior adhesion. Rust Bullet insures the safety and up keep of your car for as long as ten years.

How it works. Rust Bullet dehydrates the rust with the help of a dual patented chemical process. The dehydrated gases are expelled through its pores. It eliminates and encapsulates the rusted areas with a very strong armor tuff coating, which provides strength and durability to the rusted areas. Rust Bullet is a perfect car rust removal product that has low maintenance cost and can be easily applied to a car.

Visit the site [www.rustbullet.com](http://www.rustbullet.com) for more information about the miracle product and view the comparative analysis of Rust Bullet with other similar products that are not so effective.

# RUST CORROSION INHIBITOR

**Rust** is a very common problem that we have been facing since the Iron Age. Iron is an extensively used material in large infrastructure products as well as small machines. Rust destroys the surface of the iron or steel structures and weakens the material so that it loses its strength.

## The Regular Rust Corrosion Inhibitors

We have been using many rust corrosion inhibitors to treat Rust, the cancer of iron and steel. However, most of these [rust corrosion inhibitors](#) are cumbersome as their application involves many steps. You first have to remove the rust, and then prepare the surface metal for the application of the product. These products are not too effective and are only a short-term solution. Most of the time these temporary fixes do not solve the problem but compound it. As the corrosion inhibitor forms a film on the surface, which traps the moisture, and the destruction of the material continues.

## The Special Rust Corrosion Inhibitor

Rust Bullet is a rust corrosion inhibitor that is the perfect product to treat the rust problem in today's world. Rust Bullet is the better option for controlling rust corrosion and [rust corrosion prevention](#):

- Rust Bullet does not require much preparation of the surface that it's being applied to.
- Rust Bullet dehydrates the rust with the help of a patented chemical activity
- The second coat of Rust Bullet fills up the pinholes from the first coat and provides an impenetrable coating that protects the metal surface
- In case the Rust Bullet coating is scratched or damaged, simply reapply rust bullet in that area to prevent rusting.
- Rust Bullet is very easy to apply and maintain.
- It is a VOC compliant product with no Zinc, Chromates, acids or heavy metals
- You can apply Rust bullet to both rusty and clean surfaces.

This special rust corrosion inhibitor has two patents from the United States patent and trademark office the only rust prevention coating to ever accomplish this. The lab test reports confirm rust bullets superiority over other similar products like Rustoleum and POR 15 etc. Many scientific tests from many prestigious international labs like the National Testing Standards Inc., Atlas Weathering Services Group and Q Labs Weathering Research Center etc. have proved the superiority of [Rust Bullet](#).

# RUST BULLET

## - SCIENTIFICALLY PROVEN TECHNOLOGY

Welcome to RustBullet.com here we will present to you the world's most superior rust prevention material, Rust Bullet. We carried out technical comparison testing against the six main ingredients that most all rust prevention products contain using certified autonomous laboratories in line with the standards of the American Society for Testing and Materials (ASTM) and hence the conclusion. Rust Bullet offers exceptional abrasion resistance and is nearly impossible to scratch, making it excellent for suspension components, and being a one step two-application product, it is simple to use. Rust Bullet is a hassle-free one step process and offers you trouble-free application. Unlike other products, little or no preparation is required to prepare the metal surface. Rust Bullet can even be applied on a rusty metal surface that is cleaned with just soap and water due to Rust Bullet's superior adhesion characteristics. Rust Bullet leaves you a permanent impression of its rust killing abilities.

Be it spring-summer or fall-winter, this [rust corrosion prevention](#) material provides tough weather resistance in all climates even in salt water. Owing to advanced engineering these quality top coats remain an option to you and not a compulsion. Apply Rust Bullet on metal roofs, use it as a concrete coating for strength and durability or use the indoor clear Rust Bullet as a protective floor coating, it is not labor intensive and does not contain zinc, chromates, acids and any heavy metals. As a result of which Rust Bullet is user friendly and requires very little maintenance. To prove our supremacy we started a program to test Rust Bullet in different environmental conditions. A series of top class tests were conducted at National Testing Standards, Inc. These tests facilitated a majority of adverse environments; from hot to cold and humid to dry the tests were compared with other market leaders in this category and the unbiased results showed Rust Bullet had won the race by a mile making it the best rust corrosion prevention product available on the international market place.

In pursuit of further excellence we conducted the same ordeals at Q-Labs Weathering Research Center performing identical tests. We selected Q-Labs Weathering Research Center because it manufactures and provides test panels and many of the weather testing apparatus used around the globe to date. Our superiority in this environment was predictable this time too. Today, [Rust Bullet](#) is a world leader in rust corrosion prevention. Our scientifically patented technology makes us the choice of success.

# AUTOMOTIVE UNDERCOATING BY RUST BULLET

Automobiles are beautiful but with time and as your car is exposed to the atrocities of nature like blazing heat, rain, UV rays etc., wear and tear occurs,. All cars require proper maintenance if you want your car to have a long life. Rust is also a 'major' maintenance problem. Car Rust Paint and Automobile undercoating are solutions to car rust problems.

Generally, the lower body of an automobile is more prone to rusting than the upper body and therefore requires special treatment like [automotive undercoating](#). The requirement becomes a necessity if you have invested in a vintage automobile as your investment is at stake. But for this very important need, there are very few options of automobile undercoating available in the market. 'Rust Bullet' provides a very effective solution to this automobile undercoating problem for protection from rust.

## Rust Bullet- Kills the rust!

Rust Bullet, is a one step Urethane based patented product that penetrates rust and dehydrates it and seals the area with an armor tuff tough coating. Rust Bullet Automotive can be used as an [automotive paint](#) as well as an automotive undercoating. The paint is metallic grey in color and it takes approximately 3 Quarts to do an under carriage with two coats. Rust Bullet automotive is different than the Rust Bullet industrial formula; it is thinner and has more metal so as to give a smoother paintable finish to your car.

## Advantages of using Rust Bullet Automotive

- It requires very little prior surface preparation
- It can be applied directly to the rusty metal surface
- It has superior adhesion properties
- It is very easy to apply and maintain
- It is UV resistant

## Application of Rust Bullet Automotive

Rust Bullet Automotive can be applied to your car with the help of an HVLP spray system with a 1.3 to 1.5 tip at 40 PSI, at about 2 Mils per coat. For a 10 year warranty a dry film thickness of 6 mils is required. After applying three coats 24-48 hrs later you can apply a top coat with a color of your choice. It is advisable to run Xylene or acetone through the lines of your equipment before & after spraying the first coat of Rust Bullet, to avoid any damage to the equipment.

Rust Bullet solves the rust problem with its easy and simple process. Visit the site [www.rustbullet.com](http://www.rustbullet.com) and try this unique product.

# INDUSTRIAL COATING FOR RUST PREVENTION

With the advent of technology iron has increasingly become an integral part of the present day industry. From huge industrial machines to simple domestic equipment, it is being used everywhere, extensively. However, rust remains to be a prominent hurdle in usage of iron, especially in industry. Over the years innumerable rust fighting solutions and techniques has been developed, yet not many have given sustainable results.

Rust Bullet now brings to you one of the most effective and easy to apply rust / corrosion control products with [industrial coatings](#) that are tailor made to meet the demands of today's hi-tech industries. Developed under highly scientific conditions, these rust control industrial coatings are immensely effective and user-friendly. They neither require multiple steps for application nor specially trained personnel for its use. Its simple, can be used by any one and are extremely effective.

Refined to perfection, [rust inhibitors](#) from Rust Bullet work effectually on both clean and rusty metal. The industrial coating is scientifically proven to be highly successful for combating and killing rust. It can remove and prevent rust for a period of ten years or longer. These [stop rust](#) industrial coatings also do not require any special preparation just a clean dry surface they are highly successful under extreme weather conditions and work under water as well.

Easy availability, simplicity in usage and cost effective pricing has made these rust control industrial coatings immensely popular amongst prominent industries across the globe. An important factor in success and popularity of rust inhibitor coatings by Rust Bullet is their ease of application. The industrial coatings can be easily applied by using a brush, roller or spray equipment and do not require specially trained staff for its application, unlike most of the rust control products available in the market place today.

Along with its highly reliable and effective rust control coatings, Rust Bullet also offers comprehensive information on the industry, application information of its products and a shopping cart for ordering the product online.

Its time to get rid of the rusty coating that's all over your expensive equipment and make them indestructible with an armor tuff coating of Rust Bullet for a very long time to come it's easy to use to stop rust. Rust Bullet's superior coatings that are used for all types of industrial equipment is just a click away. Log on to [www.rustbullet.com](http://www.rustbullet.com) for more information.

# METAL ROOF

**Rust** is the biggest enemy of metal roofs. It is actually the product of a chemical reaction, which occurs when metal, comes in contact with moisture in the air. And if you think frequent painting of the metal roof is the only solution for this problem, you are probably not familiar with the latest technological advances in this field. Painting with normal paints can give you only short-term protection from rust. For years of protection against rust, you need to use a technologically advanced product such as Rust Bullet. Rust Bullet with its patented new technology is guaranteed to [stop rust](#) and provide [rust prevention](#) for up to ten years!

Maintenance of metal roofs is often difficult because of the climatic conditions it is directly exposed to. Rains, sun, wind and snow on metal surfaces make rusting a quick phenomenon. Metal roofs are often painted frequently to protect them against rust. Despite scraping off the rust before painting, some amount of rust remains on the metal. When this rusted metal is painted, the paint forms a film over the rust, forming a barrier. The barrier traps moisture, and rusting occurs underneath the paint even without your knowledge. This damages the metal and it can deteriorate sooner than you think.

Rust Bullet is not like an ordinary paint. When applied, Rust Bullet does not form a film immediately, but penetrates the rust reaching the metal underneath. Rust Bullet's patented technology dehydrates, or dries out the rust by a chemical activity, allowing the resin to solidify into a tough coating with exceptional adhesion. Thus, Rust Bullet, not only prevents rusting, but also does [rust repair](#) on the metal surface and will make your metal roof stronger and more weather resistant. It is also easy to use. Rust Bullet requires no preparation, except the removal of large flakes of loose rust by light scraping or brushing.

Rust Bullet [rust inhibitor coating](#) and its patented new technology beats other market leaders in independent laboratory testing. A technologically advanced product, it is finding its use everywhere. Rust Bullet helps you prevent rust on your metal roofs in your farm shed, warehouses and industrial areas. [Coating industrial](#) metal roofs with Rust Bullet is an economically viable and long lasting option. Why go for a replacement of your metal roof when you can do without it? Come, sun, rain or shine, with rust bullet, you don't have to worry about paintings and repairs. Just coat it with Rust Bullet and forget about your metal roofs. Rest assured Rust Bullet will guard them for years.
